

PHYSICS

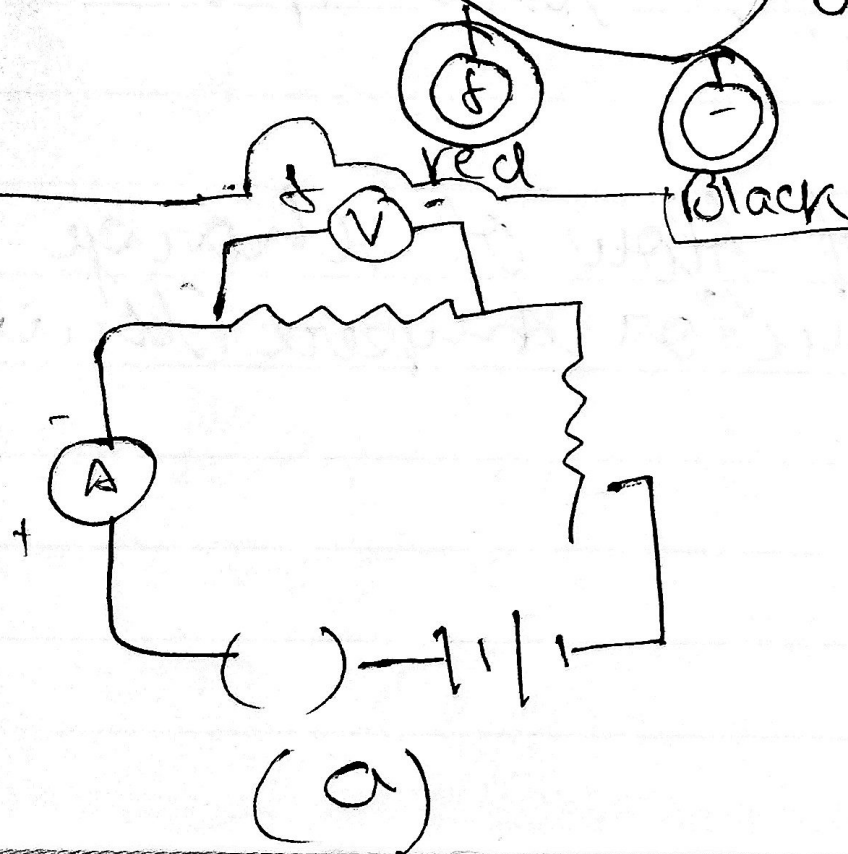

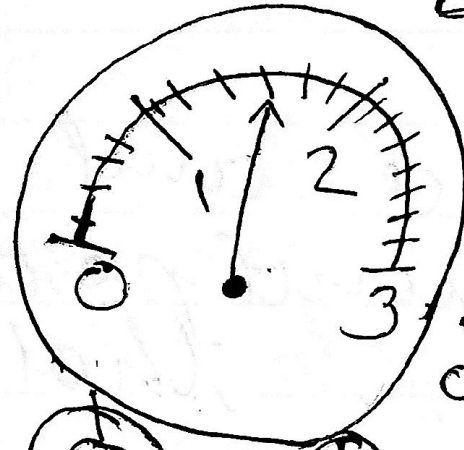

Ammeter

• Ammeter is a instrument to measure electric current.

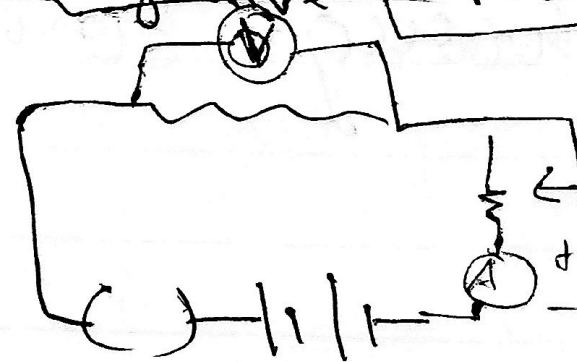

• Unit of electric current is ampere

• Red colour stands for positive terminal

• Black colour stands for negative terminal.

(a)

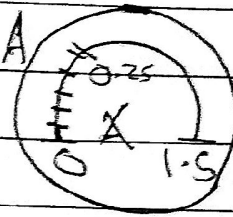

(b)

- ammeter has less resistance that's why the input current = output current.

Least Count (LC)

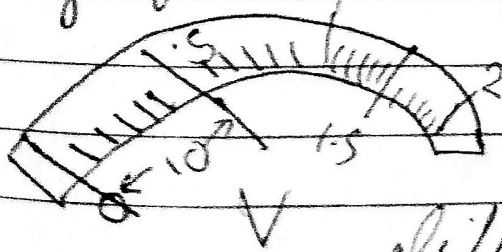

Range of this ammeter 0-1.5A

$$LC = \frac{0.25 - 0}{100} = 0.0025$$

= 0.0025A LC = Difference between two greater graduation
no. of observation

Range of voltmeter = 0 - 3V

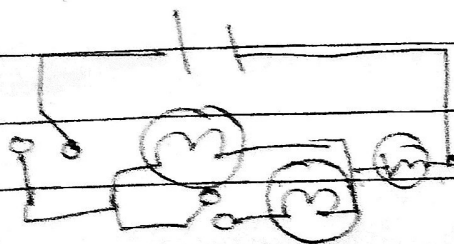

Voltmeter is an instrument to measure potential difference between the terminals.

LC of Voltmeter

$$= \frac{0.5 - 0}{10} = 0.05V$$

$$= \frac{0.5}{10} = 0.05V$$

HISTORY

27/11/25

The Gupta Era

Date: / /						
Volume						

• After the end of Kushana empire around 3rd century CE in North-West of Indian Subcontinent, the new Gupta Empire was established.

• Origin of Gupta - It is widely believed that they emerged in a region near present day Uttar Pradesh as Regional rulers.

• The Gupta period is marked by significant development in many areas such as art, architecture, literature and science. Due to its legacy, this period is considered as the Golden Age in the history of ancient India.

• Source of Information -

a) Archaeological - Prayaga Prashasti / Allahabad Pillar.

Inscription composed by Visakhadatta the court poet of Samudragupta.
