- गिरा बर्फ

संक्षेप

प्रस्तुत कहानी 'गोर और बरखा'। प्रसिद्ध कथाकार कविवरि गिराबर्फ द्वारा रचित है। कहानी कह 'गोर' है।

उस बरखा का मनोदय वर्णन है जब मैं खोला अपने दूर कुत्ता को वास्तव में भाव से जगाने का प्रयास कर रही हूँ। मैं खोला

MATHS

3) In a $\parallel gm$ it is being given that
 base = 14 dm and height = 6.5 dm.
 Find its area in

(i) cm^2

$$b = 140 \text{ cm}$$

$$h = 6.5 \text{ cm}$$

$$\text{Area of } \parallel gm = (b \times h) \text{ cm}^2$$

$$= (140 \times 6.5) \text{ cm}^2$$

$$= 9100 \text{ cm}^2$$

(ii) $m^2 = 0.91 \text{ m}^2$

4/12/23

Q4) Find the height of a $\parallel gm$ whose
 area is 54 cm^2 and the base is
 15 cm.

$$\text{Area of } \parallel gm = 54 \text{ cm}^2$$

$$\text{base} = 15 \text{ cm}$$

$$\text{Area of a } \parallel gm = b \times h$$

$$\Rightarrow 54 = 15 \times h$$

$$\Rightarrow h = \frac{54}{15} = \frac{18}{5} = 3.6 \therefore h = 3.6 \text{ cm}$$

Q) In a $\parallel\text{gm}$ ABCD, $AB = 18\text{ cm}$,
 $BC = 12\text{ cm}$, $AL \perp DC$ and $AM \perp BC$.

If $AL = 6.4\text{ cm}$, find the length of AM
 Area of $\parallel\text{gm} = b \times h$
 $= (18 \times 6.4)\text{ cm}^2$
 $= 115.20\text{ cm}^2$

Now,

$$\begin{aligned} \text{Area of } \parallel\text{gm} &= b \times h \\ 115.20 &= 12 \times AM \\ \Rightarrow AM &= \frac{115.20}{12} \end{aligned}$$

$$\begin{aligned} &= \frac{115.20}{12} \\ &= \frac{11520}{12 \times 100} \\ &= \frac{960}{10} \\ &= 96 \text{ cm} \end{aligned}$$

$$= 9.6 \text{ cm}$$

★ 8) The Height of a llgm is one-third of its base. If the area of the llgm is 108 cm^2 , find its base and height.

Let the base of the llgm = $u \text{ cm}$
then,

$$\text{height} = \frac{1}{3} u \text{ cm}$$

$$\text{Area of the llgm} = 108 \text{ cm}^2 \text{ (given)}$$

Now,

$$\text{Area of the llgm} = b \times h$$

$$108 = u \times \frac{1}{3} u$$

$$\Rightarrow 108 = \frac{u^2}{3}$$

$$\Rightarrow u^2 = 108 \times 3$$

$$\Rightarrow u = \sqrt{4 \times 3 \times 9 \times 3}$$

$$\Rightarrow u = 2 \times 3 \times 3$$

$$\therefore \boxed{u = 18}$$

$$\therefore \text{base} = 18 \text{ cm} \text{ \& } \\ \text{height} = \frac{1}{3} \times 18 = 6 \text{ cm}$$

9) The base of a triangle is twice its height. If the area of the triangle is 512 cm^2 , find the base and height.
